Culla Recliner

Culla gives patients and guests multiple ways to position themselves comfortably. Upright, it's a glider ready to be set into soothing motion. Tilted back, it's a relaxing recliner where people can rest or put their feet up. The high back and curved arms provide full support while sitting or moving in and out of the chair.

Designed by Nemschoff

Details

Lever-operated footrest raises independent of the back.

Optional casters enhance mobility.

Wallsaver edge protects walls from scuffs.
